

September 27, 2006  
FOR IMMEDIATE RELEASE  
New York, NY.

Skykits Corporation announces that it is now marketing GoatThroat Pumps. Skykits, is the North American kit distributor and S-LSA manufacturer of the Savannah series of airplanes from Italy. Mr. Eric Giles, President of Skykits, says, "The Savannah is painstakingly engineered and manufactured for the discerning sport plane enthusiast. We assemble each S-LSA Savannah to the highest standards. It makes sense for us to recommend a system which ensures that fuel is delivered to the Savannah's fuel tank in the cleanest, and safest, possible way. That's why we recommend the GoatThroat pump to every Savannah owner."

GoatThroat™ Pumps are small, versatile, hand-operated transfer pumps, safe for use with all commonly used industrial chemicals with no sparking hazard. Made of food grade polypropylene, GoatThroat™, can pressurize any container from 2 to 55-gallons in seconds. The working pressure of 1-5PSI produces consistent flow rate of 4gpm. A drip-proof faucet dispenses small amounts or gives steady flow. Containers remain upright, so there is no extra handling required for drums and no chance for accidental spills. 4 models: Viton, EPDM, Nitrile and Santoprene. Patented, GoatThroat™ Pumps meet U.N. Safety Standards for dangerous goods drums. Optional remote tap allows safe delivery of chemicals to point of use.
