

# GoatThroat® Pumps

**Safety By Design**  
**Engineered for Life**

## Why Use GoatThroat Systems?

**Safe:** Eliminate hazards: spills, drips, vapors, and VOCs; stop tipping containers; light-weight, chemically resistant polypropylene construction with beer-tap style configuration delivers liquids from upright containers with excellent ergonomics; best up to 270 cP, 14,000 SSU, 300 cSt; color coded.

**Simple:** Install pumps on barrels and pails easily; deliver precise, controlled amounts of liquid from drops to gallons; quick switch between containers improves efficiency; a remote tap delivers liquids to point of use; up to 4GPM.

**Save:** 10+ year life expectancy; conserve liquid inventory; reduce wasted time with precise, controlled delivery; RCRA empty barrels - empty to the last 1/2 inch or less; prevent hazardous spills.

**Sustain:** Using larger containers reduces environmental impact of throwing away many smaller containers; pumps can be rebuilt to factory new instead of throwing away into the landfill; controlled delivery of chemicals allows exact measurement of liquids to meet EPA compliance.

Think of these  
**Pumps as PPE**

- NO Spills
- NO Splashing
- NO Fumes
- NO Hazard

**GoatThroat®**  
Worker Safety and Environmental Compliance
