GT Meter System for TRI and Annual Air Inventory Reporting

GoatThroat Pumps offers 2 metering systems for data collection in support of required annual emissions reporting for EPA's Air Inventory Reporting, Toxic Release Inventory (TRI), Pollution Prevention (P2) and Greenhouse Gases (GHG). Developed for a Federal Government Agency for point-of-use chemical delivery, the systems also substantially reduce fugitive air emissions, prevents chemical spills and mitigate worker exposure to hazardous liquids and emissions. The GT-M-N and the GT-M-K have different meters which are matched to the liquids for compatibility. These systems can be added to any existing GoatThroat Pump System or factory installed on a new system. GT pumps typically have a service life of 10 to 15 years; and provide for spill-proof, safe transfer, virtually emission-free transfer of over 1500 fluids and solvents. RoHS compliant, these food grade products are designed to drain containers dry, making them Resource Conservation and Recovery Act (RCRA) empty. They also meet UN safety standards, helping customers meet compliance and environmental requirements.

GoatThroat™ Pumps
Worker Safety and Environmental Compliance

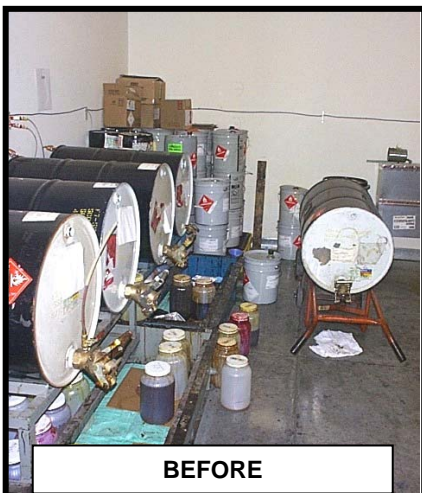

Special Features: GT-M-N and GT-M-K systems are designed for compatibility with different liquids.

Applications: This tool is designed for data collection in support of TRI and annual Air Inventory Reporting.
